pCWV-SPORT6; Site_1: Not1; Site_2: EcoRV (destroyed); RNA
source anonymous pool of 6 male brains, age range 23-27; 1
male lung, age 27; and 1 male testis, age 69. Library is
oligo-dT primed and directionally cloned (EcoRv site is
destroyed upon cloning). Average insert size 1.8 kb,
insert size range 1-3 kb. Library is normalized and
enriched for full-length clones and was constructed by C
Gruber (Invitrogen). Research Geneius tracking code

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ccagarcegegagrrraraercaccegecregecrcracracrecrerered The following repetitive elements were found in this CDN
sequence: 37-143, ofc_rich#Low_complexity
Seq primer: pXX-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1996. Denatured RNA was size fractionated on a 19 gel. First strand cDNA synthesis was primed with primer containing a Not I site. Double strand cDN size selected according to mRNA size fraction, I with ECOR I adaptor digested with Not I and their directionally into pXX-Asc vector. The library to sequence located between the Not I site and the is GATAAGGCCA. Tissue was provided by Mary Hendri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /tissue_type="chondrosarcoma Lung Metastasis cel."

1996. Denatured RNA was size fractionated on a 18
gel. First strand cDNA synthesis was primed with
primer containing a Not I site. Double strand cDN
size selected according to mRNA size fraction, II
with EcoR I adaptor, digested with Not I and then
directionally into prXARc vector. The library ta
sequence located between the Not I site and the p
is GATAAGGCCA. Tissue was provided by Mary Hendri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B1966060 mRNA linear EST 12-16-2204.x1 Melton Normalized Human Islet 4 N4-HIS 1 Homo se CDNA clone IMAGE:5672623 3' similar to TR:054907 054907 TNI WEAK INDUCER OF APOPTOSIS ;, mRNA sequence.

Site_2: Sal 1: Starting 11 Library constructed using
SuperScript Plasmid Library kit (Life Technologies). CDNA
made by oligo-dT priming. Size-selected by column
fractionation; average insert size 1.08 kb. Library was
amplified once on solid support and plasmid DNA from
library was prepared. The library DNA was normalized by
method #4 from Bonaldo, Lennon, and Soares 1996 Genome
Research 6:791-806; 0.5 microgram single-stranded library
plasmid DNA was mixed with 5 micrograms PCR product
representing library inserts and hybridized to an Ecot of
20. Single-stranded (unhybridized) plasmids were isolated
by hydroxyapatite chromatography and used to make this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CCTCTAGAGGCTGCCTGGCCTGTTCACGTGTTTTCCATCCCACATAAATACAGTA 1026

Submitted (10-WAR-2001) Sanger Centre, Hinxton, Cambridges
CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clon
requests: clonerequest@sanger.ac.uk
On Aug 24, 1999 this sequence version replaced gi:573021.
During sequence assembly data is compared from overlapping
Where differences are found these are annotated as variati
together with a note of the overlapping clone name. Note t
variation annotation may not be found in the sequence subm
corresponding to the overlapping clone, as we submit seque
only a small overlap as described above.

The following abbreviations are used to associate primary
numbers given in the feature table with their source datab
Em:, SMBL; Sw.; SWISSBFOT; Tr.; TREMBL; Wp.; WORMPEP; Info
on the WORMPEP database can be found at
the entire insert of clone RP4-686N3 This sequence was fin
follows unless otherwise noted: all regions were either
double-stranded or sequenced with an alternate chemistry o
by high quality data (i.e., phred quality >= 30); an attem
made to resolve all sequencing problems, such as compressi
repeats; all regions were covered by at least one plasmid
or more than one M13 subclone; and the assembly was confir
restriction digest. This sequence was generated from part
bacterial clone contids of human chromosome 20, constructed
Sanger Centre Chromosome 20 Mapping Group. Further inform
be found at http://www.sanger.ac.uk/HGP/Chr20
RP4-686N3 is from the library RPCI-4 constructed by the gr
Pleter de Jong. For further details see
http://www.chost.
